

DISASTER RECOVERY OVERCOME YOUR DATA STORAGE AND RECOVERY CHALLENGES

Building out your data hosting services using Sequestered Solutions as your data store just got easier. Sequestered offers secure, remote data hosting services at its Data Center in Anchorage. We are located at a Homeland Secure Facility that has N+3 redundancy, and with fiber cables terminating at the facility, we can easily bridge the gap from anywhere in the world.

We offer Managed Services that encompass everything from a complete hosting solution to a secure, offsite data storage facility.

Our facility has redundant power feeds, N+3 redundant backup power, N+3 redundant fiber connections, cameras and guards, and redundant cooling systems. Alaska has numerous options for cost effective power generation.

The Alaska Advantage allows Sequestered Solutions to offer you managed data storage at a savings over your current costs—especially when you are amortizing the cost of a new facility. We start at \$400 per half terabyte, and can provide term and volume discounts to meet your business needs.

Sequestered offers fully managed hosting, environment only (EO) hosting, and co-location services. EO and Managed Hosting equipment is housed in our patent-pending BrainyRack™, which provides power, temperature, and heartbeat monitoring that is available to you via a web interface.

Security Analysis and Planning Services

Sequestered Solutions' Security Services use world-class Intelligence-Community security practices, with both attack and defense analyses. This service gives our clients the confidence to expect attacks, prepare to survive, and plan to thrive.

DCVault™

An online continuous data protection service which was developed for highly sensitive and valuable data which is also a bandwidth-efficient, economic, transparent solution to your enterprise
